Residents participate in comprehensive plan

Residents of the city of Liberty, Missouri (26,200), are participating in all phases of the city's comprehensive plan, Blueprint for Liberty. The city gathered citizen input through workshops and surveys by telephone and through the city's newsletter. To gather input on the land use plan, driving tour instructions were placed on residents' windshields. Residents followed the driving tour around the city and provided feedback on different types of roads. For the economic development plan, professionals representing different aspects of the city's economy discussed with citizens how their sector of the economy influences the city's development. The resulting plan includes many quotes from citizens and shows how the plan was shaped by citizen input. The city is continuing to work with residents as it implements the Blueprint for Liberty.

Citizens wrote:
I would like to see Liberty more pedestrian friendly. There are not sidewalks along 152 and 291 highways.

Survey**

November 1998 - February 1999

Citizen comment:

Liberty is fragmented by highway and rail systems. These physical barriers need ways to readily and safely cross by both vehicles, pedestrian, bikers, etc.

Love the view; both coming home, North, on 291 looking toward a town that is its own place; close to the city but not part of the city; feels more like a small town, safe and friendly and: looking south, the flood plain and river, always there but never the same.

My hopes for the future - more small neighborhood parks and wading pools and sidewalks for safe walking.
