

Generative AI:

Because Who Needs Human Ingenuity Anyway?

David Graham, Chief Innovation Officer + Co-chair Civic Innovation Harvard TECH

... **CLOSER THAN WE THINK!**

by *Robert*

ROBOT DRIVING

Plans have already been perfected for control devices that will make intercity driving completely automatic.

One system, devised by RCA's famous Vladimir Zworykin, has been tested on a Nebraska public highway. Buried cables and loops of wire radiate signals that guide a specially equipped car and dictate its speed. General Motors has demonstrated robot driving with this system.

Another type of design would employ a stainless steel strip in the center of a thruway traffic lane. You'd drive over it, then push a button to start a magnetic follower electronically governed by the strip. The car would thus guide itself; and sensing devices would prevent collisions fore and aft.

The day when we can play cards or take a nap while driving is closer than we think!

SUNRAY SEDAN

Tomorrow the sunmobile may replace the automobile. The power of bottled sunshine will propel it. Your solar sedan will take energy from sunrays and store it in accumulators that work like a battery. This power will drive your car just like gasoline does today.

NEWS FLASH!

BULLETIN--SOLAR AUTOMOBILE

DETROIT, FEB. 7--THE AUTOMOBILE INDUSTRY MAY BE PRODUCING CARS DRIVEN BY SOLAR POWER IN THE YEARS AHEAD, JAMES C. ZEDER, CHRYSLER VICE-PRESIDENT, PREDICTED TODAY.

"WE KNOW HOW TO GET ELECTRICAL ENERGY FROM SUNLIGHT BY MEANS OF SILICON CONVERTERS," SAID THE CHRYSLER ENGINEERING EXPERT. "IF WE CONTINUE TO INCREASE THE EFFICIENCY OF THESE CONVERTERS, AND IF WE ARE ABLE TO DEVELOP SMALL, EFFICIENT ENERGY STORAGE CELLS, SOLAR POWERED CARS WILL BE FEASIBLE."

ZEDER ADDED THAT EXPANDING KNOWLEDGE OF NUCLEAR AND SOLAR ENERGY IS "BRINGING INTO SIGHT" MORE ABUNDANT POWER FOR PEOPLE EVERYWHERE.

ROBOT WAREHOUSES

Manpower shortages in the future may require mechanized handling of the necessities of life—food, clothing, building components and so on. As the population grows, the size of storage facilities will have to keep pace. Here is a

robot warehouse of the future, operated by a corps of mechanical men controlled by a lone operator in a control cupola suspended from a ceiling monorail. Directed electrically, never tiring, a robot warehouseman would pursue his duties as energetically as the proverbial ant.

ONE-WORLD JOB MARKET

Until recently, a man limited his job hunting to his home town. Now he sometimes searches the country. Tomorrow's job markets — and opportunities — will be world-wide.

Television will make it possible for an employer in Buenos Aires to interview a job seeker in Philadelphia. New Yorker Felix Cuervo has already pioneered in this direction, interviewing applicants for Civil Aeronautics Administration positions over a 2-way closed circuit. Said Cuervo: "Dress, bearing, manner and ability can be gauged over television about as accurately as in personal interviews."

Innovation

A photograph of a wall covered in hundreds of colorful sticky notes (pink, yellow, blue, orange, green) with various handwritten messages. The notes are densely packed and cover the entire wall, creating a vibrant, textured surface. The messages are diverse, ranging from simple words like 'LOVE' and 'FIGHT' to more complex sentences and phrases. The overall atmosphere is one of collective expression and activism.

Subnational Practices in AI Policy: A Working Guide

Insights

- Artificial intelligence policies and frameworks are developing rapidly at all levels of government
- Subnational governments at the state, regional, and local level have greater visibility on the global stage but that has not translated to AI policymaking
- State and local governments are acting in the absence of national policy
- At the local level there are a variety of approaches to AI adoption but the level of engagement varies widely
- The engagement varies from outright restriction – experimentation – adoption

Local Government GenAI Maturity Model

Phase 0 | Restricted

Phase 1 | Unengaged

Phase 2 | Limited Engagement

Phase 3 | Active Experimentation

Phase 4 | Limited Adoption

Phase 5 | Innovative

Seattle

- Artificial Intelligence Principles – Align with city’s values
- Acquisition of GenAI consistent with general technology policy
- Outputs reviewed by humans
- GenAI content must be sourced to the GenAI system
- Follow’s the city’s data privacy and security policies

San Jose

- Iterative guidance that may be updated quarterly
- City established working groups
- Users are responsible for materials created with AI support
- Cite and record use of GenAI via a form

Economic Scan

OFFICE OF INNOVATION + ECONOMIC DEVELOPMENT

Third Quarter, Fiscal Year 2020-2021

April 20, 2021

The following scan provides an overview of key economic indicators for January, February, and March 2021 for the City of Carlsbad. This economic scan is updated quarterly to provide information that is relevant to the health of Carlsbad's economy. For regularly updated information regarding the Carlsbad economy and economic development visit carlsbadca.gov/doingbusiness.

Job Postings *(Source: EMSI, January - March 2021)*

There were 10,607 unique job postings in Carlsbad between January and March, an increase of 1,065 postings from the previous quarter. This indicates a continued upswing in hiring over the past three quarters. The median posting duration was 30 days, slightly above the regional average. The median advertised salary for these postings was \$46,700. As seen in the previous quarter, the top-hiring industries were manufacturing, administrative services, and professional, scientific and technical services. Recent feedback from hospitality and restaurant businesses indicate rehiring in those industries has been a challenge to employers.

GENERAL

Carlsbad GRP *(Source: EMSI, 2020)*

\$15.3B

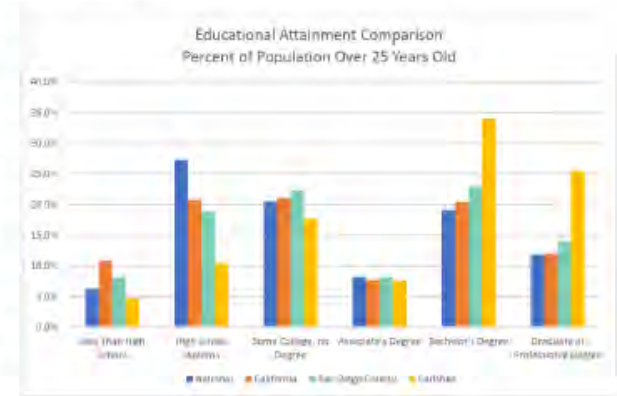

As of 2020, Carlsbad had the second largest gross regional product in San Diego County at \$15.3B, only trailing the City of San Diego. From 2019, GRP remained unchanged, signaling the pandemic yielded no economic growth. Key industries driving this output are professional, scientific and technical services, computer and electronic product manufacturing and other manufacturing. These industries are generally more resilient in recessions. Another major industry, accommodation and food services, has been severely impacted by the pandemic.

TALENT + WORKFORCE

Education *(Source: U.S. Bureau of Labor Statistics - 2019)*

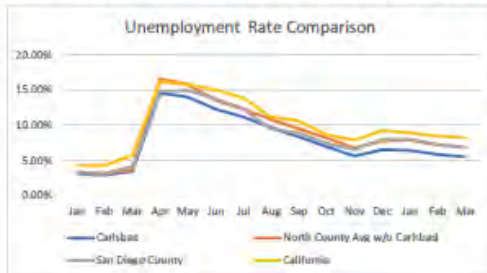

Carlsbad has established itself as having the right workforce to fuel innovation in tech and life sciences fields. Carlsbad businesses can access talent from San Diego, Orange County, and even southwest Riverside County. Nearly 60% of working-age residents hold a bachelor's degree, with more than 25% attaining an advanced degree. Outside of some communities in central San Diego, Carlsbad has the heaviest concentration of households with degrees in science, technology, engineering, and mathematics (STEM degrees). This is among the leading reasons that firms choose Carlsbad, the local talent.

JOBS

Unemployment Rate *(Source: California Employment Development Department, March Report)*

Prior to the pandemic, Carlsbad boasted a low unemployment rate of 2.9%. At the height of the pandemic, unemployment spiked to 13.8%. Unemployment improved to a low of 5.7% in November, before rising to 6.6% in December amid the surge of cases and corresponding health orders. Since then, unemployment has dropped again and now sits at 5.6%. Carlsbad continues to fare better than other North County cities, the County of San Diego, and the State of California.

Talent Pipeline

Nearby public and private universities offer top-notch programs. Within a 30-mile radius, more than a half-dozen universities and colleges confer more than 35,000 degrees annually. The Carlsbad business community works closely with higher education partners to align various education tracks with local workforce needs.

Carlsbad

- Included in the city's data policy orders
- Applies to all digital tools including Generative AI
- Is permissive in experimentation
- Focuses on professionalism and accountability
- Recognizes the value but that bias may exist
- Must adhere to privacy and security
- Respects employees and the collaborative nature of using technology for good

Common Themes

- Human in the Loop
- Privacy and Security
- Accountability
- Recognizing bias

Divergence

- Types and features of allowed or banned GenAI systems
- Employee authorization process
- IT Department involvement
- Level of granular documentation and use restrictions

Takeaways

- There are international, national, and state policy frameworks in development
- Local government engagement will be on a spectrum not ubiquitous
- Adoption should consider local context and public engagement
- GenAI presents a valuable opportunity
- The new normal is change
- Culture is key
- “The new cool” can be transform when rooted in public service values
