Construction Site Security

Construction site burglaries and thefts continue to occur in our community. The information in this brochure will assist you in implementing an effective site security and crime prevention plan for your project.

October 2004

9 Steps to Securing Your Job Site

1 Appoint a crime prevention liaison

This person consults with the police department on issues of site security and receive updates on local criminal activity. They establish and/or update current crime prevention procedures for your company.

2 Create a site security plan

Creating a site security plan before the project begins is essential. Questions that need to be addressed before the construction begins include: How are we going to secure our perimeter? What type of lighting is needed? Where will we place video surveillance? How are we going to secure valuable equipment and materials? Will we employ on-site security? These are but a few issues that need to be considered in order to reduce the likelihood of being victimized.

3 Ask your neighbors for help

Whether building in a residential community or a commercial development, it is important to solicit help from nearby residents or businesses. Share your building schedule with them and ask them to notify you and the police if they observe

anything suspicious on your property. Consider offering a reward if the information provided results in the arrest and conviction of the offender.

4 Identify your assets and property

All assets at your construction site should be identified, inventoried and tracked as closely as possible. Develop a numbered identification system to identify all company equipment. Prominently display your company logo and contact information on all equipment. Consider using tracking technology on your most valuable equipment. Encourage employees to clearly identify their tools and personal property.

5 Secure your perimeter

Proper fencing around your perimeter is the first line of defense against criminals. Fencing should be at least 8' high, set in concrete and secured with a hardened steel chain and lock. Chain link fencing is preferred because it allows for natural surveillance of your site. If possible the entire site should be fenced; if this is not possible, make sure the construction trailer and any equipment storage areas are protected. Consider the use of video cameras at critical and isolated areas of the job site

6 Lock it up

Provide storage sheds or fenced areas for the secure storage of equipment and tools. Special consideration needs to be given to any area that houses hazardous materials, explosives, solvents or poisons. Keep construction vehicles locked and their keys secured (not in the vehicle) when not in use. Gas and oil caps should be locked and machinery should be disabled with a hidden ignition cutoff switch.

7 Control site access

Ideally your job site should have only one access point, allowing for close monitoring of comings and goings from the site. Employee parking areas should be outside the construction fence or in a clearly designated area within the fence line; workers should be easily identified and have credentials that indicate site access. No trespassing signs should be posted in conspicuous areas throughout the job site and a list of employees who have after hour access to the property should be available to the police.

8 Light it up

A properly lighted job site can act as an effective

deterrent to criminal activity. Well-lit areas should include any office trailers, equipment storage trailers and vehicle parking areas. Motion sensitive lighting should be used throughout the job site especially in isolated areas away from public view.

9 Ask your employees for help

Unfortunately employees or subcontractors are responsible for some of the crime that occurs at construction sites. Encourage employees to report criminal behavior or suspicious activities. Have clearly stated policies regarding the prosecution of individuals who commit crimes and immediately report any criminal activity to the police.

Construction sites often have inadequate lighting, poor perimeter security, a lack of natural or video surveillance and inefficient inventory and access tracking.

Security Checklist

- You have appointed a crime prevention liaison.
- A site security plan is in place.
- Residential and business neighbors have been asked to assist with crime prevention efforts.
- The entire site perimeter is fenced.
- Perimeter fencing is 8' tall and free from obstructions.
- Fence posts are set in concrete.
- There is only one entrance / exit to the site.
- The site entrance is monitored by security personnel.
- There is video surveillance in critical areas of the job site.
- Special consideration has been given to securing areas that contain explosives, poisons or hazardous materials.
- Company equipment and tools are clearly marked with identifying characteristics.
- Employees have marked their tools for easy recognition.
- All company equipment has been inventoried.
- Company vehicles and equipment are locked and disabled overnight and on the weekends.
- There is sufficient lighting to illuminate critical areas of the site including office trailers and storage facilities.
- Light power sources are well protected.
- Employee parking is located outside of the job site.
- Employees understand company policies regarding criminal activity and have been asked to assist with crime prevention efforts.
